Proje-6:

```
#include <iostream>
using namespace std;

class Fraction {
private:
    double denominator = 1;
    double numerator = 0;
public:
    Fraction() = default;
    Fraction(double x, double y) {
        denominator = y;
        numerator = x;
    }
    friend void print(Fraction);

    Fraction operator*(Fraction object) {
        Fraction total{};
        total.numerator = numerator * object.numerator;
        total.denominator = denominator * object.denominator;
        return total;
    }
};

void print(Fraction frac) {
    if (frac.denominator != 0 && frac.numerator != 0) {
        cout << frac.numerator << "/" << frac.denominator << " or " <<
frac.numerator / frac.denominator;
    }
    else if (frac.numerator == 0 && frac.denominator == 1) cout << "0";
    else cout << "Tanımsız!";
}

int main()
{
    setlocale(LC_ALL, "Turkish");
    Fraction frac1(4,4),frac2(1,3);
    cout << "Fraction 1:";
    print(frac1);
    cout << endl;
    cout << "Fraction 2:";
    print(frac2);
    cout << endl;
    cout << "Frac1*Frac2=";
    Fraction frac3 = frac1 * frac2;
    print(frac3);
    return 0;
}
```

The screenshot displays the Microsoft Visual Studio IDE with a C++ project named 'Proje-6'. The code in 'Proje-6.cpp' defines a `Fraction` struct and functions for addition, printing, and a main function. The main function creates two fractions, `frac1(7,4)` and `frac2(8,3)`, and prints their sum. The output window shows the program's execution, displaying the fractions and their sum as `Frac1*Frac2=56/12 or 4.66667`. The console window shows the command prompt output, indicating the program ran successfully.

```
16 Fraction operator+(Fraction object) {
17     Fraction total{};
18     total.numerator = numerator * object.numerator;
19     total.denominator = denominator * object.denominator;
20     return total;
21 }
22
23
24
25 void print(Fraction frac) {
26     if (frac.denominator != 0 && frac.numerator != 0) {
27         cout << frac.numerator << "/" << frac.denominator << " or " << frac.numer
28     }
29     else if (frac.numerator == 0 && frac.denominator == 1) cout << "0";
30     else cout << "İlanımsız!";
31 }
32
33 int main()
34 {
35     setlocale(LC_ALL, "Turkish");
36     Fraction frac1(7,4), frac2(8,3);
37     cout << "Fraction 1:";
38     print(frac1);
39     cout << endl;
40     cout << "Fraction 2:";
41     print(frac2);
42     cout << endl;
43     cout << "Frac1+Frac2=";
```
